

Google Ads profitability audit

Acme & Sons | <https://example.test/report>

BREAK-EVEN CPA

100 currency units

BREAK-EVEN ROAS

5x

MEASURED VS FUTURE SIMULATION

Current account vs optimized + CSS

METRIC	CURRENT - MEASURED	OPTIMIZED + CSS - SIMULATION
Advertising cost	1,000 currency units	1,000 currency units
Orders	8	12
CPA	125 currency units	83 currency units
Sales	3,200 currency units	5,800 currency units
ROAS	3x	6x

Current figures are the stored monthly-normalized view. The optimized scenario includes an estimated 20% CSS CPC reduction and diminishing returns as budget grows. It is a simulation, not a guarantee.

MONTHLY-NORMALIZED REPORT VIEW - RANKED BY COST

Products consuming your budget

PRODUCT	COST	ORDERS	CPA	SALES	ROAS	MONEY AT RISK
Loss <Alpha>	700 currency units	1	700 currency units	700 currency units	1x	560 currency units

MONTHLY-NORMALIZED REPORT VIEW - RANKED BY OPPORTUNITY

Profitable products receiving too little traffic

PRODUCT	COST	ORDERS	CPA	SALES	ROAS	OPPORTUNITY
Winning & Growing	100 currency units	3	33 currency units	1,200 currency units	12x	1,680 currency units

How the account could look after optimization

1. Stop the loss

Limit products that stay below minimum ROAS.

2. Move the budget

Give controlled growth to products already proven profitable.

3. Grow under control

Increase spend only while simulated ROAS remains above break-even.

Operating costs are modeled at a fixed 20% of sales. All current-account figures use the stored monthly-normalized report view; future figures are simulations.

MONTHLY-NORMALIZED REPORT VIEW

How campaigns are organized now

CAMPAIGN	TYPE	COST	SALES	ROAS
PMax <UK> & Brand	PERFORMANCE MAX	900 currency units	2,700 currency units	3x

DEVRIKA RECOMMENDATION

How the account should be organized

1. Search - brand protection

Only searches for the store name. Always on, with a small controlled budget.

2. Performance Max - profitable products

Products proven above the minimum ROAS receive the main growth budget.

3. Standard Shopping - control

Products and searches are controlled separately; products below the threshold are limited.
